

# A THREE MONTH STUDY EVALUATING THE EFFICACY OF ULTRACEUTICALS ULTRA A BODY TREATMENT CREAM IN THE TREATMENT OF PHOTOAGING

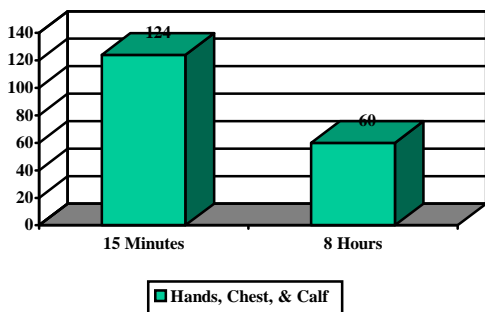

**Abstract:** Thirty women, between the ages of 21 and 65, with a moderate amount of photodamaged skin were selected to participate in the study. Panelists were instructed to apply the product BID (morning and evening) to the hands and body for 12 weeks. Panelist evaluations were made of the overall improvements in photodamaged skin (smoothness, softness, and firmness) at baseline, 4 and 12 weeks after product use. Additionally, the moisture content of the skin (hands, chest, and calf areas) was measured via Electrical Conductance at baseline, immediate (15 minutes) and 8 hours after one application, and after 4 and 12 weeks product use. Panelist perception of the benefits after 12 weeks of use indicated a 58% and 63% agreement for improvement in firmed/toned skin and an 87% and 90% agreement for improvement in smoother/softer skin.

**Panelist Rating of Skin Improvements**

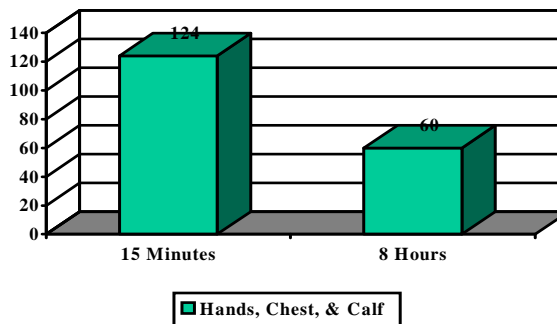

Electrical Conductance values for 15 minutes and 8 hours after one application revealed a 124% and 60% increase in skin moisture content, respectively. Conductance values after 4 and 12 weeks used yielded an 84% and 97% increase in skin moisturization.

**Percent Increase in Moisturization**

**Percent Increase in Moisturization**

Based on the data obtained from this study, Ultraceuticals Hands & Body Lotion produced a significant increase in the moisture content of skin after just one application and after 4 and 12 weeks of product use. Panelist agreement demonstrated a significant improvement in the overall appearance of photodamaged skin (smoothness, softness, and firmness) leaving skin looking and feeling more youthful and supple.
